

YALV! – Yet Another Log4Net Viewer

YALV! is a log viewer for Log4Net that allows to compare multiple log files simultaneously.

FEATURES:

- Log files merging into one list
- Dynamic log events filtering
- Dynamic show/hide log events by log level
- Favorites log folders list
- Open most recently used files
- Sort and reorder columns
- Copy log event data to clipboard
- Open files by dragging them to the main window

CONFIGURATION:

Log4Net config file must be setup with XmlLayoutSchemaLog4j layout; just need a few lines in your application config file to configure it to use this format. See examples on below:

```
<log4net>
  <appender name="FileAppender" type="log4net.Appender.FileAppender">
    <file type="log4net.Util.PatternString" value="sample-log.xml"/>
    <appendToFile value="true"/>
    <layout type="log4net.Layout.XmlLayoutSchemaLog4j">
      <locationInfo value="true"/>
    </layout>
  </appender>
  <root>
    <level value="ALL" />
    <appender-ref ref="FileAppender" />
  </root>
</log4net>
```

USAGE:

Download latest binaries, unzip and launch YALV.exe

TECHNICAL INFO:

It is a WPF Application based on .NET Framework 4.0 and written with C# language.
